

Dayton Sustainability Plan

City of Dayton

PROJECT DESCRIPTION

For this project, BPS served as a subconsultant to develop a Sustainability Plan for the City of Dayton, Ohio. The goal of the project was to create a community-focused collaborative process to develop an up-to-date shared vision for a sustainability strategy and a coinciding implementation plan.

BPS assessed current sustainability approaches; determined strengths and weaknesses; identified opportunities to improve the City's practices; and solicited resident and stakeholder feedback on sustainability initiatives and programs. BPS also worked closely with the City to develop a clear consensus on program needs, concerns, and implementable strategies within the sustainability context.

As part of the planning process, BPS performed a comprehensive review of sustainability best practices nationwide to inform the content of the Plan, covering topics such as Energy, Green Economy & Market Development, Environmental Protection & Conservation Practices, Transportation, Sustainable Planning, Infrastructure & Design, Health & Well-Being, Waste Reduction, Social Equity, and Engaging Dayton. Additionally, BPS provided support for the Design Charrette and Public Meeting to collect valuable feedback on community goals. BPS also was instrumental in developing a marketable name for the Dayton Sustainability Plan - ReNEW Dayton.

LOCATION

City of Dayton, Ohio

HIGHLIGHTS
