

# Downtown Toledo Transportation Plan

## City of Toledo

### PROJECT DESCRIPTION

For this project, BPS served as a subconsultant to develop a multimodal transportation plan for Downtown Toledo. Downtown Toledo is entering a period of growth and revitalization into a vibrant, livable and thriving segment of the City. The goal of the project was to develop an effective and usable Transportation Plan for Downtown Toledo that will help to solidify this development goal and advance the strategic interests of the community.

BPS worked with the City of Toledo to complete policy reviews on local and regional transportation plans, including TMACOG's multi-modal transportation plans, and develop corresponding best practices. BPS also assessed the current conditions in Downtown Toledo and forecasted future conditions. Potential alternatives for street modifications as well as policies and programs were identified. Deliverables for this project included an evaluation and prioritization of projects, programs, and policies based on funding sources and estimated costs.

### LOCATION

City of Toledo, Ohio

### HIGHLIGHTS

- Multi-modal Transportation Planning
- Communication Services

### MAJOR TASKS

- Policy Review
- Best Practices Benchmarking
- Current & Future Conditions Assessment
- Alternatives Development
- Evaluation of Projects, Programs, and Policies
