

# BPS Project: US42 Access Management Study

Ohio Department Of transportation

BPS is performing an access mangement study on a 36 mile portion of US 42. US 42 crosses several major roadways, including I-70, US 40, US 33, and serves as an important connection bypassing Central Ohio to the northwest. US 42 travels diagonally and thus has numerous skewed intersections that may become safety concerns as traffic volumes increase. BPS is studying this area to help anticipate growth and develop a plan that is complementary to the US 42 corridor. The project team is providing early and continuous public involvement and will provide recommendations at the conclusion of the study to enhance the area's multi-modal transportation needs.
