

PREVIOUS MITIGATION ACTIONS STATUS

January 2023

As part of each Hazard Mitigation Plan, the County is tasked with developing a list of mitigation actions that can help prepare communities and their residents for hazards, as well as lessen the impact of these hazards.

As part of this process, the status of each mitigation action included in Summit County's 2018 Hazard Mitigation Plan needs to be determined.

In the following tables, enter your name and position and select one of the following status options for each mitigation action in your jurisdiction:

- **Completed** (indicate when the action was completed)
- **Deleted** (indicate why the action was deleted)
- **Deferred** (indicate why the action was deferred)
- **Unchanged** (indicate why the action remains unchanged)
- **Ongoing** (include percentage complete or description of progress – e.g. “Ongoing (20% Complete)” or “Completed annually from 2018-2022”).

Please include remarks for each mitigation action for which you enter a status. Remarks should address:

- **Completed:** If the action was completed, when was it complete? Where was it enacted? Did it have the intended results? Did it achieve the goals outlined in the plan? What factors contributed to success?
- **Not Completed:** If the action was not completed, what were the barriers to implementation? For instance, was there a lack of political support, funding, staff availability, or other obstacle? Should the action be included in the updated mitigation strategy (yes or no)?

Several abandoned coal mines, seven known, are located throughout the western part of the City of Tallmadge. The potential for mine subsidence could cause damage to personal and private property within the City, as it has twice in the past. This project would allow for mapping of the mine structures, allowing for a true map of where the mines are which would lead to the creation of a mitigation plan including mine stabilization, filling, zoning restrictions etc. that would limit the potential for damage to persons or property. The roadway on Everet Road, east of Revere Road has been steadily deteriorating and was recently closed by the Summit County Engineer's Office. This roadway is a vital link connecting Richfield and Bath Township to Boston Township, Cuyahoga Falls and the Cuyahoga Valley National Recreation Area.	Village of Richfield, Bath Township, Boston Township, City of Cuyahoga Falls, Richfield Township, and Valley Fire District	<input type="checkbox"/> Completed <input type="checkbox"/> Deleted <input type="checkbox"/> Deferred <input type="checkbox"/> Unchanged <input type="checkbox"/> Ongoing	When: _____ Why: _____ Why: _____ Why: _____ % Complete: _____	
With the recent closure of Everett Road, by Summit County Council this year and now with increased traffic on Wheatley Road, consideration should be given on the portion of Wheatley where Furnace Run is encroaching on the guardrail and right of way on the north side of Wheatley Road in Richfield Township. Our concern is if this erodes further, and water encroaches on the roadway, then we will have no access to our Richfield Township residents in case of an emergency or Riverview Road for mutual aid as there are more and more hikers and visitors to the National Park every day. As Fire Chief of the Village and the Township, Chief McLean would like this as another consideration in the Mitigation Program. I've also received the support of Mindy Remec, Richfield Township Administrator. POSITION:

Summit County Metro Parks

Mitigation Action (Strategy)	Jurisdictions	Status	Remarks	Comments
Sand Run stream flows through Sand Run Metro Park in the Cities of Fairlawn and Akron, Ohio. As the cities developed, stormwater was diverted into the stream which now suffers extreme flooding during storm events. The City of Akron has identified at least 50 stormwater outfalls to Sand Run with another possible 50 outfalls that are undocumented. Stream bank erosion is severe and threatens property, infrastructure (roads, buildings, lodges, utility ROW's) as well as the biodiversity and ecological integrity of the park. Summit Metro Parks has prepared an extensive plan to address flooding in a manner that will preserve, or improve, the existing ecology of the park and surrounding communities. The plan includes bank stabilization, grade control structures, and improved culverts.
